Reducing Carbon footprint and increasing the positive impact on environment

Approach:

Our approach towards the problem includes :

- user friendly web application**
- an individual survey**
- practical carbon footprint calculation**
- customized recommendations**
- links to blog articles**

**Carbon Score=
Carbon Footprint-Oxygen
Footprint**

Carbon footprint: A measure of the amount of carbon dioxide released into the atmosphere as a result of the activities of a particular individual, organization, or community.

Oxygen footprint: Oxygen footprint is defined as a significant increase or decrease in oxygen. • Oxygen footprint could be regarded as an indicator of global ecosystem changes.

Learning outcomes and problems faced!

Offline Hackathon: perspective on
real life based future opportunities
Teamwork: Helpful in

understanding different
perspectives and reaching one
final outcome
